SUMMARY

AI Automation Engineer building **Python ETL pipelines, AI-powered workflows and Power BI analytics**. At Cushman & Wakefield, automated business operations across 1,800+ records, cutting manual processing by **85%**. Microsoft Certified Azure AI Engineer with hands-on experience building LLM-powered applications, Python automation systems and modern data pipelines.

EXPERIENCE

AI Automation Apprentice | Cushman & Wakefield *Apr 2026 – Present*

- Engineered a Python-based **ETL pipeline** that ingests, cleans and maps candidate records from five intake sources (web forms, regional Excel lists, WhatsApp submissions) into a single SharePoint-hosted master, with field-level validation, automated error flagging and run logging that removed 85% of manual processing.
- Built a Python-powered **candidate intelligence** platform with Power BI dashboards for senior leadership: a 70-field database tracking 8 recruitment KPIs, hiring-funnel status, pipeline ageing and source effectiveness across 1,800+ profiles.
- Automated fragmented **hiring workflows** mapped through stakeholder interviews and gap analysis, replacing ad-hoc searches with a structured retrieval system that cut candidate lookup time by 90%.
- Consolidated a PAN-India **vendor database** (800+ deduplicated records) with zone-wise market intelligence dashboards, enabling standardised vendor pre-qualification across multiple regions.

Software Engineer Intern – AI | Inker Robotics *Aug 2024 – Oct 2024*

- Built **Aura**, a React (Vite, Tailwind CSS) chatbot for RoboPark with a layered design: intent detection and rule-based responses for common queries, Groq LLM API (Llama 3.1) fallback for open-ended ones, and a content-moderation filter. **GitHub**
- Ran **end-to-end testing** of AI systems for Robopark, a government-backed robotics initiative, managing 5,000+ data samples under strict quality and data-privacy protocols.
- Wrote **automation scripts** that cut manual test cycle times by 40% and streamlined the software testing lifecycle.
- Reported system **KPIs** to senior supervisors through dashboards and status reports, keeping AI system delivery aligned with cross-functional goals.

SKILLS

Programming: Python · SQL · JavaScript
Version Control: Git · GitHub
AI & Machine Learning: LLMs (Claude API, Groq Llama 3.1), Prompt Engineering, Generative AI, TensorFlow, Scikit-learn, NLP (BERT, Word2Vec)
Data Engineering: ETL Pipelines · Data Validation · Data Quality · Workflow Automation · Process Automation
Visualization & BI: Power BI · Tableau · Advanced Excel · Business Intelligence Dashboards
Cloud & APIs: Azure AI Services · REST APIs
Web & Tools: React · MongoDB · HTML · CSS (Tailwind) · JIRA · Confluence · Procore · Agile/Scrum

PROJECTS

NLP-Based Automated Answer Sheet Evaluation

- Built a **semantic grading engine** using Python, BERT, Word2Vec and Scikit-learn to score free-text answers against reference responses, improving grading accuracy by 60% while cutting manual evaluation effort by 85%.

Predictive Analytics for Customer Behaviour

- Modelled **customer lifetime value** in Python (Pandas, Scikit-learn) using random forest and gradient boosting, surfacing churn-risk segments through Tableau and lifting retention by 20% in evaluation.

CERTIFICATIONS

AI-102: Azure AI Engineer Associate - Microsoft, Issued Jun 2024 — Credential ID: 34D2275E62F435AF
AI-900: Azure AI Fundamentals - Microsoft, Issued Dec 2023 — Credential ID: E5DBB08295B6A2F0
Machine Learning 1 - Columbia University, Issued Aug 2025 — Credential ID: 157747939
Building with the Claude API - Anthropic, Issued Mar 2026 — Credential ID: kt37vibcvbgi

EDUCATION

B.Tech in Artificial Intelligence & Data Science | MES College of Engineering, Malappuram *2020 – 2024*

LEADERSHIP

Gold Microsoft Learn Student Ambassador - one of the few Gold Microsoft Learn Student Ambassadors in Kerala, organising AI hackathons and statewide study groups (2023–24).
Branch Chairperson, IEEE Robotics & Automation Society - led robotics and automation workshops for 100+ members (2023–24).
